

SYMFONI

GLOBAL CALENDAR 8.5

Get a fast and easy overview over your colleagues and save time during the day.

Calendar connection

One simple-to-use application takes the guesswork out of connecting with your colleagues

- Smart free text search field allows you to easily find others.
- Colleagues can be defined into different groups for ease of use.
- Fully integrated with your current calendar for automatic updates.
- Intuitive navigation and simple to learn.
- Up and running in just minutes with a simple download.
- Ability to distinguish between public and private time and events.

Save time with an immediate overview of who is available and when

- Boxes are color coded to show current availability.
- Can view all employees or switch between defined groups.
- Current activities can be displayed over individual pictures.
- Just click on a person to see a detailed overview of their exact schedule.

- Independent of operating system!

It is all in the details

- Get an immediate overview of the utilization of resources.
- Can choose between various time frames (right now, per day and per week).
- Use the calendar function to quickly jump between weeks or months to see what is planned.
- Specific activities can be displayed when clicking on the highlighted area.

The screenshot shows the 'Global Calendar' application. The left sidebar lists users with their status: Anders Hoffgaard (Langt salgmøde), Anette Holck Nielsen (Langt salgmøde), Carlos Rio (Available), Dagfinn Berge (Available), Jens Krogh (Team Henning arrangement: Go racing & eating), Jon Eriksen (Available), Jon Stahlfest (Team Henning arrangement: Go racing & eating), and Kjetil Andenas. The main calendar view shows a timeline for Friday, March 12th, with a highlighted appointment for Anders Hoffgaard from 11:00 to 12:00 labeled 'Fællesmode'. The interface includes search bars, filters, and navigation controls.

Technical information

Global Calendar can be configured to suite your company's own needs and standards. For example adjustments can be made based on how calendar appointments are shown, in which global calendar they appear and how they should be displayed.

Larger companies with offices in different locations can have several Global Calendars on the same server - and consolidate Global Calendars from different servers. This means that the administrator can choose which individuals and/or groups should appear in the calendar.

Global Calendar respects access to the individual mail file, which is the prerequisite in order for Global Calendar to have the necessary rights to read appointments. Thereby, Global Calendar can be used as a standard filter so that public accessibility to individual calendars can be avoided.

Global Calendar makes use of Adobe Air's user interface which is automatically downloaded during the installation.

All management of the system can be made from a central configuration database, regardless of how many calendars have been installed.

Global Calendar has been developed over many years in collaboration with a wide range of large and small organizations.

We have experience with smaller installations with a single server, as well as large complex server environments.
